Golden Thread — how it works

From what marketers are saying right now to channel-ready content, for the Semrush marketing team.

Mac app + web studio, one shared core · Version 0.3.0 · Handoff · October 2026

Ask AI runs the whole loop

Streams answers, remembers people and decisions, and turns requests into buttons. Nothing paid starts without a click and an estimate.

- **"Small scan, last few hours"** — Sizes a quick scan, prices it, then writes a trends report and posts it back.
- **Acts across the app** — Yes / Skip with notes, write reports, make assets, set status, open anything.
- **Grounded cards** — Trends, reports, runs, charts and real quoted posts — numbers from the studio, never invented.
- **Memory** — Saved conversations, remembered preferences, trend history across runs.
- **Edits prompts** — Explains any prompt and proposes a change you apply in one click.

THE LOOP · RESEARCH TO CHANNEL-READY CONTENT

01 Collect

- Apify collects posts from saved X accounts, LinkedIn profiles and subreddits.
- Programs run on demand or on a schedule; every run is capped and priced first.

Research programs · Quick scans

02 Find trends

- AI reads the posts in batches and names clear trends.
- The Trend tracker follows each one across runs: new, rising, steady, fading.

Trends · Trend board · Sheets

03 Decide

- The team says Yes or Skip, with a note and the channels it suits.
- Approval rules and Monday.com statuses can decide too.

Needs your OK · Inbox · Monday

04 Write

- Approved trends get a trends report and an editorial toolkit, evidence linked.
- Teammates co-edit in a minimal editor, leave notes, keep every version.

Reports · Library · Prompts

05 Make

- One report becomes every channel asset, from blog and newsletter to paid, PR and social.
- Pictures and short videos follow the brand reference images.

Assets · Make channel assets

06 Ship

- Assets move Draft → In review → Approved → Scheduled → Published.
- Reports land in Google Drive; trends sync to Monday.com.

Calendar · Analytics · Drive

Automate

Playbooks
Ready-made recipes for common marketing jobs, with a preview and cost.

Workflows
Schedule → research → rules → reports → assets → sync, inside an approved budget.

Quick scans
Hour-level looks at one topic, sized from plain words.

Next up
Home shows the one or two things each person should do now.

Stay in sync

Monday.com
Two-way: trends, stages, owners, dates and links, with a sync log.

Google Drive
Every report saved to a shared folder as a Google Doc, kept current on edit.

Sheets & Trend tracker
Run workbooks and a cross-run tracker, exportable.

Inbox & share links
Mentions, decisions and finished runs; links open the exact item.

Control

Model routing
Pick the service, model and effort for every AI task, with presets.

Prompt Library
Every prompt editable, versioned and testable; runs keep their version.

People & access
Admin, Editor, Channel owner and custom roles, built from capabilities.

Cost guards
Estimates before paid work, run caps, optional daily AI limits.

PEOPLE USE

Mac app (Electron)
Signed universal build; one person, local data folder.

Web studio (Node)
Behind company sign-in (SSO proxy) or personal links; live updates over SSE.

SHARED CORE

180 methods, one roles gate
Every call checked server-side against 28 capabilities; deny by default; money hidden from roles that can't see costs.

Data folder
State, runs and evidence, team & roles, Ask AI memory, prompts, report docs and notes, sync logs. Backups and restore scripts.

SERVICES IT CALLS

Apify
Post collection

Claude Code · Anthropic
Plan sign-in or API key

Codex · OpenAI
ChatGPT plan, key, images

OpenRouter
Any text model

fal.ai
Images and video

Google
Drive, Docs, Sheets

Monday.com
Two-way board sync

Your data stays yours
Keys encrypted at rest

Roles Admin · everything · Editor · research, write, make · Channel owner · their channel's trends and assets
